

OVERVIEW

Aiming for “all-weather” total return, Diversified Income Risk-Managed aims to increase total return throughout market cycles and reduce exposure to severe asset class pullback.

PORTFOLIO CONSTRUCTION

Income Segment

Spans a diverse set of income opportunities in non-investment grade fixed income, and nontraditional income category: REITs, MLPs, global infrastructure ETFs, preferreds. Flexibility to invest 100% or in any combination of high yield or assets in non-traditional income category.

Alternate Segment

Allocates to combination of defensive and other investment grade fixed income; capital protection when markets are unfavorable for income-seeking assets.

Positioning, March 31, 2019

Important disclosures

Wilbanks, Smith & Thomas Asset Management, LLC ("WST" or the "Firm") is defined as an SEC registered investment adviser headquartered in Norfolk, Virginia. WST claims compliance with the Global Investment Performance Standards (GIPS®) Prospective clients can obtain a GIPS-compliant presentation and/ or the firm's list of composite descriptions by contacting WST with the contact information referenced above.

The Diversified Income Risk-Managed Composite has an inception date of June 30, 2013 and consists of all fee-paying, fully discretionary accounts under active management at WST that adhere to the Diversified Income Risk-Managed strategy. The strategy utilizes a tactical approach built on a proprietary quantitative framework that is designed to achieve attractive risk-adjusted returns through capital appreciation and income. The strategy invests in exchange-traded funds covering a broad range of the corporate capital structure, debt to equity. In addition to a broad capital structure mandate, the strategy overlays a diverse asset class base such as Real Estate Investment Trusts ("REITs"), Master Limited Partnerships ("MLPs"), Dividend Strategies and High Yield Debt. During less favorable environments or when attractive investment opportunities are limited, the strategy has the flexibility to invest in an actively managed investment grade bond fund, treasuries or investment grade floating rate notes. This strategy is generally implemented through the trading of a limited universe of individual stocks or exchange-traded funds. Prior to October 24, 2016, the Diversified Income Risk-Managed strategy was referred to by WST as the WST Asset Manager – Diversified Income strategy. The composite was created October 2016. Results portrayed reflect the reinvestment of dividends, capital gains and other earnings when appropriate. During the period(s) shown, there were no material market or economic conditions which affected the results portrayed. With the exception of several market corrections during the period(s), the overall market as measured by the S&P 500 was generally rising. If such trends are broken, the clients may experience real capital losses in their managed accounts. The performance results portrayed during the period: 6/30/2013 (strategy inception)-present relate only to a limited group of the adviser's clients selected based on suitability and risk tolerance. This factor has not had a material effect on performance but could lead to the termination of the composite in the event of significant outflows.

Comparison with Market Index - The market index displayed for comparison to the Diversified Income Risk-Managed Composite is the NASDAQ US Multi-Asset Diversified Income Index. The NASDAQ Multi-Asset Diversified Income Index. The NASDAQ US Multi-Asset Diversified Income Index is designed to provide exposure to multiple asset segments, each selected to result in a consistent and high yield for the index. The Index is comprised of securities classified as US equities, US Real-Estate Investment Trusts (REITs), US preferred securities, US master-limited partnerships (MLPs) and a high-yield corporate debt ETF. For comparison purposes, the benchmarks are fully invested and actual performance may vary. Market indices are unmanaged and do not reflect the deduction of fees or expenses. We consider an index to be a portfolio of securities whose composition and proportions are derived from a rules based model. See the appropriate disclosures regarding models, indices and the related performance.

Valuations are computed and performance is reported in U.S. dollars. Returns are presented gross and net of management fees and include the reinvestment of all income and dividends. Net of fee performance was calculated using actual management fees. Some accounts in the composite pay a "wrap fee" which is an all-inclusive or bundled fee based on a percentage of assets under management and may include investment management services, transaction costs/brokerage commissions, portfolio monitoring, consulting services, and custodial services. Gross performance results for wrap accounts in the composite are gross of the entire wrap fee information as transaction expenses have not been deducted. Past performance is not a guarantee of future results.

Investment advisory fees are described in Wilbanks Smith & Thomas Asset Management, LLC's Form ADV 2A. To illustrate the possible effect of fees on the total return of an account, what follows is an illustration: A client investing in the comparative index S&P 500 over the last 10 years (as of December 31, 2015) would have earned 7.31% return on an annualized basis. With the effect of fees at 2.00% per year, this client can then expect their net return to be 5.16% per year compounded over the same time period.

Standard Deviation of return measures the average deviations of a return series from its mean, and is often used as a measure of risk. A large standard deviation implies that there have been large swings in the return series of the manager. Correlation is a measure of how two securities move in relation to each other. The Sharpe Ratio measures excess return per unit of risk which relates the difference between the portfolio's return and the return of the risk free rate to the standard deviation of the portfolio returns for the same period. A beta of 1 implies that you can expect the movement of a manager's return series to match that of the benchmark used to measure beta. Maximum Drawdown is the maximum loss (compounded, not annualized) that the manager ever incurred during any sub period of the entire time period. Conceptually, the calculation looks at all sub periods of the time period in question and calculates the compound return of the manager over that period. The maximum drawdown is the minimum of zero and all these compound returns. Maximum Run-up is the opposite of Maximum Drawdown and shows the maximum gain the manager incurred during any sub period of time. Commodities and futures generally are volatile and are not suitable for all investors. The value of commodity funds relate directly to the value of the futures contracts and other assets held within the fund and any fluctuation in the value of these assets could adversely affect an investment in commodities. Exchange Traded Funds (ETF's) trade like stocks, are subject to investment risk and will fluctuate in market value.

Securities and Insurance Products and Services –Are not FDIC or any other Government Agency Insured –Are not Bank Guaranteed –May lose Value.
